Ig heavy chain V region (anti-DNA, 6NVH and 6QVH) - mouse (fragment)
C;Species: Mus musculus (house mouse)
C;Species: Mus musculus (house mouse)
C;Date: 16-Sep-1992 #sequence_revision 16-Sep-1992 #text_change 16-Aug-1996
C;Accession: P£0238
R;Shlomchik, M.; Mascelli, M.; Shan, H.; Radic, M.Z.; Pisetsky, D.; Marshak-Rothstein, A A;Title: Anti-DNA antibodies from autoimmune mice arise by clonal expansion and somatic A;Accession: P£0231; MUID:90111618; PMID:2104919
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            R;Kawarabayasi, Y.; Hino, Y.; Horikawa, H.; Yamazaki, S.; Haikawa, Y.; Jin-no, K.; Takah awa, H.; Takamiya, M.; Masuda, S.; Funahashi, T.; Tanaka, T.; Kudoh, Y.; Yamazaki, J.; K Man Res. 6, 83-101, 1999
A;Title: Complete genome sequence of an aerobic hyper-thermophilic Crenarchaeon, Aeropyr A;Reference number: A72450; MUID:99310339; PMID:10382966

```
The invention relates to a novel method of promoting lipid mobilisation in a human which comprises administering an insect adipokinetic hormone (AKH). The hormone of the invention demonstrates anorectic, antidiabetic, hypotensive, cardiant, antiarthritic, cytostatic, nephrotropic, happacorropic, analgesic, cerebroprocective and uropathic activities. The method of the invention may be useful for treating obesity, type II diabetes, cholelithiasis, hypertension, coronary heart disease, archerosclerosis, types I to VI glycogenosis, arthritis, cancer, renal failure, liver disease, chronic pain, sleep apnea, stroke and urinary incontinence. The current sequence is that of the honeybee AKH peptide of
                                                                                                                                                                                                                                                             ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             antidiabetic; hypotensive; cardiant; antiarthritic; cytostatic; nephrotropic; hepatotropic; analgesic; cerebroprotective; uropathic; obesity; type II diabetes; cholelithiasis; hypertension; coronary heart disease; atherosclerosis; glycogenosis; arthritis; cancer; renal failure; liver; chronic pain; sleep apnea; stroke; urinary incontinence; painted lady.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pharmaceutical composition useful for promoting weight loss, comprises an insect adipokinetic hormone, having a pyroglutamate residue at its amino

                                                                                                                                                                                                                                      ö
                                          The invention relates to a novel method of promoting lipid mobilisation in a human which comprises administering an insect adipokinetic hormone (MXH). The hormone of the invention demonstrates anorectic, antidiabetic, hypotensive, cardiant, antiarthritic, cytostatic, nephrotropic, hepatotropic, analgesic, cerebroprotective and uropathic activities. The method of the invention may be useful for treating obesity, type II diabetes, cholelithiasis, hypertension, coronary heart disease, atherosclerosis, types I to VI glycogenosis, arthritis, cancer, renal failure, liver disease, chronic pain, sleep apnea, stroke and urinary incontinence. The current sequence is that of the painted lady AKH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention describes a novel method for the detection of a mammalian infection by an acid-resistant microorganism (A) by treating a faecal sample with at least two different monoclonal antibodies (MAD) (or their fragments or derivatives) or aptamers (collectively (I)) and detecting formation of a complex (C) between (I) and the corresponding antigen of (A). The first and second (I) bind to epitopes of different antigens (Ag). These epitopes are present, after passage through the intestines,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Detecting infection by acid-fast microbes for diagnosis of Helicobacter pylori, comprises reacting a fecal sample with two binding reagents for antigens that survive intestinal passage.
                                                                                                                                                                                                                                                                                                                                                                                                                                      Acid-resistant microorganism; detection; faecal; intestine; infection; monoclonal antibody; heavy chain; complementarity determining region;

ö
(ii) a structure against which an antibody is produced by an animal infected or immunized with (A), or its extract, lysace, derived protein or fragment, or with a synthetic peptide. Practically all mammals display at least one of the specified epitopes. The method is used to detect infection by acid-fast bacteria, particularly of the genera Helicobacter, motobacterium and Campylobacter, specifically H. pylori, H. hepaticus, M. tuberculosis, C. jejuni and C. pylori. (I) may also be used the respectively. The method is direct and non-invasive, and provides an inexpensive and easily standardizable diagnosis, despite possible degradation of antigens during passage through the intestines. This sequence repersents a fragment of a H. pylori beta-urease-binding antibody heavy chain complementarity determining region CDRI which is used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Detecting infections by acid-resistant microorganisms, particularly for diagnosing Helicobacter pylori, comprises immunochromatographic detection of antigen in feces.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention describes a novel method for detecting infection by an acid-resistant microorganism (A), in a mammal, using microorganism (A), in a mammal, using immunochromatography. The method is used to diagnose infection by an acid resistant microorganism (A), in a mammal, such as Helicobacter. Campylobacter or Mycobacterium, particularly H. pylori (most preferred), H. hepatica, C. jejuni and M. tuberculosis. The method is rapid, simple, inexpensive and non-invasive, and may indicate the stage of infection. A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   epitope;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Catalase; beta-urease; antibody; antigen; detection; infection; epitope

This invention describes a novel method for detecting, in a mammal, infection by an acid-resistant microorganism (A) which comprises reacting with a fecal sample with: (i) a receptor (R) such that a complex is formed with an antigen (As) of (A); or (ii) two different R so that a three-part complex is formed with Ag, and the formation of a complex detected. R are specific for an Ag which, after passage through the intestines, at least in some mammals, retains a native (or corresponding) structure against which the mammal produces antibodies (when immunized or infected with (A), or its extracts, lysates or derived proteins (or fragments) or synthetic peptides). The products of the invention have antibacterial activity. The method is used to disgnose infection by Holicobacter, Campylobacter or Mycobacterium, particularly H. pylori (most preferred), H. hepatica, C. jejuni and M. tuberculosis, and also to monitor the
                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                   present in the sample and only a single receptor provides a reasonably secure diagnosis, with specificity and selectivity improved by detecting serveral spitopes (of catalase) or different antigens (catalase) and urease). The method can be automated. This sequence represents a complementarity determining region (CDR) from an antibody raised against the H. pylori catalase or beta-urease antigen which is used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Heavy chain; light chain; catalase; beta-urease; detection; CDR; antigen; infection; acid-resistant microorganism; fecal; antibody; diagnosis; antibacterial; complementarity determining region.
test strip used in the method may include a filter to eliminate particles
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             for

The hormone of the invention demonstrates anorectic, antidiabetic,
progress of treatment. Receptors, particularly antibodies, directed against Ag can be used therapeutically for treatment of infections. The method requires only one R to provide a reasonably secure diagnosis (although use of two R improves sensitivity), so is relatively inexpensive and more easily standardized. Also it is direct, noninfection. This sequence represents a complementarity determining region (CDR) from an antibody generated against a Helicobacter pylori antigen (catalase or beta-urease) which is used to illustrate the method of the

The method involves incubating a library of phage particles with the target cells to allow binding of the antibody fragment expressed on the surface of the method is useful for obtaining human antibodies against known and novel surface antigens in their native configuration, expressed on surface antigens in their native configuration, expressed on surface antigens in their native configuration, expressed on sovel phenocypically defined subpopulations of cells. The present sequence is complementarity-determining region 3 (CDR3) of monoclonal phage antibodies (MoPhabs) used in the exemplification of the invention
hepatotropic, analgesic, cerebroprotective and uropathic activities. The method of the invention may be useful for treating obesity, type II diabetes, cholelithiasis, hypertension, coronary heart disease, atherosclerosis, types I to VI glycogenosis, athrritis, cancer, renal failure, liver disease, chronic pain, sleep apnea, stroke and urinary incontinence. The current sequence is that of the painted lady AKH peptide 2 of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Obtaining a phage particle, useful for obtaining human antibodies against known and novel surface antigens, by incubating a phage library with target cells to allow binding of the antibody fragment to the antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CDR3; complementarity-determining region 3; monoclonal phage antibody;

The invention discloses a method for obtaining a phage comprising an antibody, or its fragment, directed against antigens associated with a target cells surface in a heterogeneous cell population. The method comprises providing a library of antibodies, or their fragments, expressed on the surface of phage particles, incubating the phage antibody library with the target cells, separating the target cells and phage particles associated with the target cells and then phage particles not associated with the target cells and then recovering the phage particles. Also disclosed is a cell-type specific phage antibody library and an call-type specific phage antibody is the method is useful for obtaining a selection of phage antibodies (Phabs) and monoclonal phage antibodies (MoPhabs). The method is also useful for detecting known and novel structures on various populations of blood and coetal bone marrow cells. The sequence presented is an example of the partly randomised human complementarity determining region 3 (CDR3) used in the construction of the antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              target cells in heterogeneous cell population, by incubating phage antibody library with target cells, and separating phage particles bound

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 11
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAR97875
                                                                                                             ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to oligonucleotides (see AAL26793-AAL34659) encoding polymorphic variants of proteins related to amylases, amyloid proteins, anglopoletin, apoptosis related proteins, cadherin, cyclin, polymerase, oncogenes, histones, kinases, colony simulating factors, complement related proteins, cytochromes, kinasins, cytokines, interferone, interleukins, G-protein coupled receptors and thioesterases. The present sequence is a peptide encoded by one such oligonucleotide. The oligonucleotides and the peptide encoded by them may be used in the present expression of the proteins listed above. Disorders that may be prevented, diagnosed and/or treated include multifactorial diseases with a genetic component, such as autoimmune diseases (e.g. rheumatoid arthitis, multiple sclerosis, diabetes, systemic lupus erythromatosus and Grave's disease), inflammation, cancer (e.g. cancers of the bladder, brain, breast, colon and kidney, leukaemia), diseases of the nervous system and an infection of pathogenic organisms
                                                                                                                                                                                                                                                                                                                                                        Immunosuppressive, immunostimulatory, antiinflammatory, cytostatic, neuroprotective, antimicrobial; gene therapy; vaccine; amylase, cancer; amyloid protein; anglopoietin; apoptosis related protein; cadherin; cyclin; polymerase; oncogene; histone; kinase; colony stimulating factor; complement related protein; cytochrome; kinasin; cytokine; interferon; interleukin; G-protein coupled receptor; thioesterase; inflammation; multifactorial disease; autoimmune disease; infection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Polymorphic nucleic acids encoding e.g. amylases, cyclins, polymerases, oncogenes and histones, useful for diagnosing and treating, e.g. cancer, autoimmune diseases and infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            70.8%; Score 17; DB 4; Length 14; 40.0%; Pred.                                                                                                                                                                 AAR97871-R97960 are overlapping peptides used for the epitope mapping of the Japan cedar pollen allergen Cry j II. Cry j II and allergenic peptides of it are useful in the diagnosis, prevention and treatment of Sugi pollinosis, the allergic reaction to Japan cedar pollen. Significant regions of the allergen were identified using the overlapping peptides of the full epitope derived from a Cry j II antigen-specific T cell line. Amino acids 66-80 (AR97884) and 186-200 (R978908) of the full mature 460 amino acid allergen are the most allergenic of the 90 peptides tested
                                               Japan cedar pollen allergen Cry j II epitope – comprises at least part of specified 460 aminoacid protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Allergen, epitope, overlapping peptide, Cry j II, cedar pollen;

                                                                                                                                                                                                    ö
                                                                                                                                    AAR97871-R97960 are overlapping peptides used for the epitope mapping of the Japan cedar pollen allergen Cry j II. Cry j II and allergenic peptides of it are useful in the diagnosis, prevention and treatment of Sugi pollinosis, the allergic reaction to Japan cedar pollen. Significant regions of the allerger were identified using the overlapping peptides of the full peitope derived from a Cry j II antigen-specific Teal line. Amino acids 66-80 (AAR97884) and 186-200 (R978908) of the full mature 460 amino acid allergen are the most allergenic of the 90 peptides tested
                                                                                      Japan cedar pollen allergen Cry j II epitope - comprises at least part of specified 460 aminoacid protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence represents residues 16-30 of the Cry j 2 protein, and is peptide of the invention. The peptides are derived from Japanese cedar pollen antigens, and are used as immunotherapeutic agents in the treatment of allergy. The peptides can be used for identification and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Peptides derived from Japanese cedar pollen antigens are immunotherapeutic agents – useful for allergy treatment and typing HLA class II molecules in allergy sufferers.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to human thioredoxin nucleic acid and polypeptide molecules, designated 22108 and 47916. The compound that modulates the activity or expression of 22108 and 47916 nucleic acid is useful for treating or preventing a disorder characterised by aberrant activity of 22108 and 47916-expressing cell, specifically for reducing or inhibiting the aberrant activity of the 22108 and 47916-expressing cancer cell. The 22108 and 47916 nucleic acid and polypeptide are useful for diagnosing, preventing or treating cancer in a subject (e.g. carcinoma, sarcoma, metastatic or haematopoietic disorders (e.g. leukaemia), or cancers of the lung, breast, thyroid, head neck, prostate or genito-urinary tract), cardiovascular diseases (e.g. angina pectoris, arteriosclerosis or heart failure) or brain disorders (e.g. brain abscess, meningitis, Alzheimer's diseases). The thioredoxin DNA is also useful in gene therapy. The present sequence is human thioredoxin, 47916 peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cancer; lung; breast; thyroid; head; neck; prostate; genitourinary tract; cardiovascular disease; angina pectoris; arteriosclerosis; heart failure; brain disorder; brain abscess; meningitis; Alzheimer's disease; sarcoma; cytostatic; carcinoma; cardiant; neuroprotective; antiinflammatory;
typing of the particular HLA class II molecules in an allergy sufferer, and also for peptide immunotherapy of an allergy. Using these peptides the immunotherapy can be targeted more specifically to the requirements of the individual patient, allowing more effective treatment of an allergy, including those patients for whom treatment with a conventional immunotherapeutic agent is ineffective
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  designated

AAG62970-AAG63005 represent complementarity determining region 3 (CDR3) of VL and VH chains of antiboddies of the invention. The specification describes a mixture or panel of 5 different specific binding members, cach comprising an antibody VH and/or VL variable domain and capable, when displayed on the surface of filamentous bacteriophage particles or in the case of a specific binding member comprising the bS VH and/or VL variable domain when bound to human serum amyloid protein, to pass through a mammalian blood brain barrier (BBB). The panel is useful for through a mammalian blood brain members with a desired property such as ability to cross BBB, ability to bind endochelial calls or other brain call antigen, ability to bind areas of inflammation in the brain or BBB breaken or ability to bind intracellular adhesion molecules and to bind transferrin receptor. The antibodies are useful in diagnosis, prophylaxis and treatment of human or animal body, including neurological disease, such as Alzheimer's disease, prion disease, luples and traumatic brain injury and any diseases involving inflammation occurring within the brain or central nervous system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        androgen receptor binding peptide; androgen receptor interacting peptide;
                                                                                                                     Antibody, light chain, VL, amyloid protein, blood brain barrier; endothelial cell, brain cell antigen; inflammation; adhesion molecule; transferrin receptor; neurological disease; Alzheimer's disease; prion disease; Alzheimer's disease; prion disease; Alzbeimer's disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Mixture or panel of antibodies for selecting specific binding members that cross the blood brain barrier, for use in delivering different molecules and treating neurological diseases.
                                                                                  Complementarity determining region 3 (CDR3) of VH chain of clone G101
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ..

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents a T-cell epitope peptide from Japanese cypress pollen antigen Chao2. The present invention describes peptides which correspond to the T-cell epitope sites on Japanese cypress pollen antigens Chao1 and Chao2. The peptides can be used as a reagent for the diagnosis of allergy to Japanese cypress pollen, and as an antigen in the treatment and prevention of spring tree pollen disease in which the pollinosis involves reactivity to Japanese cypress pollen. This sequence is an epitope used in the construction of a novel fusion immunoglobulin heavy chain (IgH) protein with a mammalian, especially buman, IgH chain fused in frame at its N-terminus to one or more human cimmunoglobulin heavy chain (IgH) gpl20 epitopes. Fusion Ig proteins and/or transfected cells are used to tolerise subjects to gpl20 epitopes and to maintain this tolerance, particularly for treatment of HIV infection, optionally together with other therapeutic/prophylactic agents such as vaccines, chemotherapeutic agents of immune response modifiers. Such proteins can be used against other diseases where an immune response is deleterious, e.g. microbial infection, tumours or autoimmune disease.

C adeleterious of tolerance suppresses production of antibodies against gpl20, so prevents or inhibits 'bystander' apoptosis of uninfected T cells that are bound to gpl20 protein, maximising induction of protective antiviral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New fusion immunoglobulin heavy chain including gp120 epitopes and related complete antibodies - DNA, vectors and transformed cells, used to induce tolerance to the epitopes for treatment of human immune deficiency

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes a polypeptide that binds to the androgen receptor, or a polypeptide that comprises at least 50% amino acid a receptor, or a polypeptide that comprises at least 50% amino acid analysing the surface conformation of a protein using one or more of the polypeptide sequences mentioned above; (2) methods of identifying modulators of protein function using one or more of the polypeptide sequences mentioned above; (3) a pharmaceutical composition comprising a pharmaceutical carriar and one or more of the polypeptide sequences rescribed above; (4) a peptide that binds to the androgen receptor, the binding being competitively inhibited by the polypeptide above; (5) a chimmeric protein comprising the above polypeptide above; (5) a chimmeric protein competitively inhibited by the polypeptide above; (6) a chimmeric protein competition of the portion of the filamentous phage protein begarding the above polypeptide; (6) a phage protein being sufficient for integration of the filamentous phage displaying the above polypeptide; (6) a filamentous phage displaying the above polypeptide; (7) a method of adagnosing a disease in a patient characterised by abnormal levels of cativation of androgen receptor, comprising providing a sample of body fluid or tissue of the patient, administering a disposetic amount of activated androgen receptor, in the body fluid or tissue of the patient; and (8) a method of treating a patient suffering from a disease and (8) a method of treating a patient suffering from a disease and (8) a method of treating a patient suffering from a disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          comprising administering to the patient at the appetuic amount of the patient appearance to the patient appearance amount of the pharmaceutical composition described above. The androgen receptor interacting polypeptide has cytostatic activity, and can be used in gene therapy. The composition and methods are useful for diagnosing or treating patients suffering from diseases characterised by abnormal levels of activation of androgen receptor, such as prostate cancer. They may also be used in biological research, as therapeutics or for in vitro or in vivo classification of compounds. The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New polypeptides that bind to the androgen receptor, useful for diagnosing or treating diseases associated with abnormal levels of activation of androgen receptor, e.g. prostate cancer, or in biological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          .;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 formylated peptide receptor; FPR, neutrophil; monocyte; endothelial cell; inflammation; cardiovascular disease; central nervous system disease; gastrointestinal disease; skin disease; genitourinary disease; joint disease; respiratory disease; HIV infection; antiinflammatory; cardiant; cerebroprofective; neuroprotective; nootropic; dermatological; gynecological; immunosuppressive; anti-HIV.
                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to peptides (ABR44811-ABR47162 and ABR47164 -ABR47385) derived from the Chemotaxis Inhibitory Protein (CHIPS) from Staphylococous aureus. The peptide fragments are useful in the prophylaxis or treatment of diseases of disorders involving the C5areceptor (C5aR) and/or formylated peptide receptor (FPR) or neutrophils, monocytes and endothelial cells or involving acute or chronic inflammation reactions. The diseases or disorders include cardiovascular diseases, disease of the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, joint diseases, respiratory diseases and HIV infection
          formylated peptide receptor, FPR; neutrophil; monocyte; endothelial cell; inflammation; cardiovascular disease; central nervous system disease; gastrointestinal disease; skin disease, genitourinary disease; joint disease; respiratory disease; HIV infection; antiinflammatory; cardiant; cerebroprotective, neuroprotective; nootropic; dermatological; gynecological; immunosuppressive; anti-HIV.
                                                                                                                                                                                                                                                                                                                          Combination of peptides derived from chemotaxis inhibiting protein from Staphylococcus aureus (CHIPS) having CHIPS activity, useful in prophylaxis and treatment of inflammation, cardiovascular, skin and kidney diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to peptides (ABR44811-ABR47162 and ABR47164-ABR47185) derived from the Chemotaxis Inhibitory Protein (CHIPS) from Staphylococcus aureus. The peptide fragments are useful in the prophylaxis or treatment of diseases or disorders involving the C5areceptor (C5aR) and/or formylated peptide receptor (FPR) or neutrophils, monocytes and endothelial cells or involving acute or chronic inflammation reactions. The diseases or disorders include cardiovascular diseases, disease of the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, joint diseases, respiratory diseases, joint diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         formylated peptide receptor; FPR; neutrophil; monocyte; endothelial cell inflammation; cardiovascular disease; central nervous system disease; agatrointestinal disease; skin disease; genitourinary disease; joint disease; respiratory disease; HIV infection; antiinflammatory; cardiant; cerebroprotective; neuroprotective; nootropic; dermatological;

The present invention relates to peptides (ABR44811-ABR47162 and ABR47164 -ABR47385) derived from the Chemotaxis Inhibitory Protein (CHIPS) from Staphylococcus aureus. The peptide fragments are useful in the prophylaxis or treatment of diseases or disorders involving the C5areceptor (C5aR) and/or formylated peptide receptor (FPR) or neutrophils, monocytes and endothelial cells or involving acute or chronic inflammation reactions. The diseases or disorders include cardiovascular diseases, disease of the central nervous system, gastroincestinal diseases, skin diseases, genitourinary diseases, joint diseases, respiratory diseases, joint diseases,
                            Combination of peptides derived from chemotaxis inhibiting protein from Staphylococcus aureus (CHIPS) having CHIPS activity, useful in prophylaxis and treatment of inflammation, cardiovascular, skin and

                                                                                                                                                                                                                                                                                 The present invention relates to peptides (ABR44811-ABR47162 and ABR47164 - ABR47385) derived from the Chemotaxis Inhibitory Protein (CHIPS) from Staphylococcus aureus. The peptide fragments are useful in the prophylaxis or treatment of diseases or disorders involving the C5arreceptor (C5aR) and/or formylated peptide receptor (FPR) or neutrophils, monocytes and endothelial cells or involving acute or chronic inflammation reactions! The diseases or disorders include cardiovascular diseases, disease of the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, joint diseases, respiratory diseases, inflection

             The present invention relates to peptides (ABR44811-ABR47162 and ABR47164 -ABR47185) derived from the Chemotaxis Inhibitory Protein (CHIPS) from Staphylococcus aureus. The peptide fragments are useful in the prophylaxis or treatment of diseases or disorders involving the C5a-receptor (C5aR) and/or formylated peptide receptor (PPR) or neutrophils, monocytes and endothelial cells or involving acute or chronic fillammation reactions. The diseases or disorders include cardiovascular diseases, disease of the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, joint diseases, respiratory diseases, joint diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to peptides (ABR44811-ABR47162 and ABR47164 ABR47185) derived from the Chemctaxis Inhibitory Protein (CHIPS) from Staphylococcus aureus. The peptide fragments are useful in the prophylaxis or treatment of diseases or disorders involving the C5arstoeptor (C5aR) and/or formylated peptide receptor (PRR) or neutrophils, monocytes and endothalial cells or involving acute or chronic inflammation reactions. The diseases or disorders include cardiovascular

The present invention relates to peptides (ABR44811-ABR47162 and ABR47164-ABR47385) derived from the Chemotaxis Inhibitory Protein (CHIPS) from Staphylococcus aureus. The peptide fragments are useful in the protein or treatment of diseases or disorders involving the CSarcecptor (CSaR) and/or formylated peptide receptor (FPR) or neutrophils, monocytes and endothelial cells or involving acute or chronic inflammation reactions. The diseases or disorders include cardiovascular diseases, skin diseases, genitourinary diseases, joint diseases, respiratory diseases, joint diseases,
                                                                                                                                                                                                                                                     CHIPS; Chemotaxis Inhibitory Protein; C5a-receptor; C5aR; clormylated peptide receptor; FPR; neutrophil; monocyte; endothalial cell; inflammation; cardiovascular disease; central nervous system disease; gastrointestinal disease; skin disease; genitourinary disease; point disease; respiratory disease; proprotection; antiinflammatory; cardiant; cerebroprotective; neuvoprotective; nootropic; dermatological; gynecological; immunosuppressive; anti-HIV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Combination of peptides derived from chemotaxis inhibiting protein f
Staphylococcus aureus (CHIPS) having CHIPS activity, useful in
prophylaxis and treatment of inflammation, cardiovascular, skin and
kidney diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Score 16; DB 6; Length 6; Pred. The peptide fragments are useful in the prophylaxis or treatment of diseases or disorders involving the C5areceptor (C5aR) and/or formylated peptide receptor (FPR) or neutrophils, monocytes and endothelial cells or involving acute or chronic inflammation reactions. The diseases or disorders include cardiovascular diseases, disease of the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, joint diseases, respiratory diseases, hin infection

The peptide fragments are useful in the prophylaxis or treatment of diseases or disorders involving the C5a-receptor (C5aR) and/or formylated peptide receptor (PRP) or neutrophils, monocytes and endothelial cells or involving acute or chronic inflammation reactions. The diseases or disorders include cardiovascular diseases, disease of the central nervous system, gastrointestinal respiratory diseases, skin diseases, geniculary diseases, joint diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CHIPS; Chemotaxis Inhibitory Protein; CSa-receptor; CSaR; clormylated peptide receptor; FPR; neutrophil; monocyte; endothelial cell; inflammation; cardiovascular disease; central nervous system disease; gastrointestinal disease; skin disease; genitourinary disease; ploint disease; respiratory disease; penitourinary disease; cardiant; cerebroprotective; neuroprotective; neuroprotective; neuroprotective; neuroprotective; neuroprotective; neuroprotective; dermatological; gynecological; immunosuppressive; anti-HIV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Combination of peptides derived from chemotaxis inhibiting protein from Staphylococcus aureus (CHIPS) having CHIPS activity, useful in prophylaxis and treatment of inflammation, cardiovascular, skin and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

The present invention relates to peptides (ABR44811-ABR47162 and ABR47164 stable derived from the Chemotaxis Inhibitory Protein (CHIPS) from Staphylococcus aureus. The peptide fragments are useful in the prophylaxis or treatment of diseases or disorders involving the C5areceptor (C5aR) and/or formylated peptide receptor (FPR) or neutrophils, monocytes and endothelial cells or involving acute or chronic inflammation reactions. The diseases or disorders include cardiovascular diseases, disease of the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, joint diseases, respiratory diseases, joint diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       formylated peptide receptor; FPR; neutrophil: moncyte; endothelial cell inflammation; cardiovascular disease; central nervous system disease; gastrointestinal disease; skin disease; gentcourinary disease; joint disease; respiratory disease; HIV infection; antiinflammatory; cardiant; cerebroprotective; neuroprotective; nootropic; dermatological; gynecological; immunosuppressive; anti-HIV.
                                                                   Combination of peptides derived from chemotaxis inhibiting protein from Staphylococcus aureus (CHIPS) having CHIPS activity, useful in prophylaxis and treatment of inflammation, cardiovascular, skin and kidney diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Combination of peptides derived from chemotaxis inhibiting protein from Staphylococcus aureus (CHIPS) having CHIPS activity, useful in prophylaxis and treatment of inflammation, cardiovascular, skin and

                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to peptides (ABR44811-ABR47162 and ABR47164-ABR47385) derived from the Chemotaxis Inhibitory Protein (CHIPS) from Staphylococcus aureus. The peptide fragments are useful in the prophylaxis or treatment of diseases or disorders involving the C5areceptor (C5aR) and/or formylated peptide receptor (FPR) or neutrophils, monocytes and endothelial cells or involving acute or chronic inflammation reactions. The diseases or disorders include cardiovascular diseases, disease of the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, joint diseases, respiratory diseases,

                                                                                                                                                                                                                                                                                                                        ö
                                  The prosent invention relates to peptides (ABR44811-ABR47162 and ABR47164-ABR47385) darived from the Chemotaxis Inhibitory Protein (CHIPS) from Staphylococcus aureus. The peptide fragments are useful in the prophylaxis or treatment of diseases or disorders involving the C5arceoptor (C5aR) and/or formylated peptide receptor (PPR) or neutrophils, monocytes and endothelial cells or involving acute or chronic diseases. The diseases or disorders include cardiovascular diseases, disease of the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, joint diseases, respiratory diseases, joint infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CHIPS; Chemotaxis Inhibitory Protein; C5a-receptor; C5aR; formylated peptide receptor; FPR; neutrophil; monocyte; endothelial cell; inflammation; cardiovascular disease; central nervous system disease; gastrointestinal disease; skin disease; ganitourinary disease; joint disease; respiratory disease; HV infection; antiinflammatory; cardiant; cerebroprotective; neuroprotective; nootropic; dermatological;

The peptide fragments are useful in the prophylaxis or treatment of diseases or disorders involving the CSareceptor (CSaR) and/or formylated peptide receptor (FPR) or neutrophils, monocytes and endothelial cells or involving acute or chronic inflammation reactions. The diseases or disorders include cardiovascular diseases, disease of the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, joint diseases, respiratory diseases, joint diseases,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to peptides (ABR44811-ABR47162 and ABR47164-ABR47385) derived from the Chemotaxis Inhibitory Protein (CHIPS) from Staphylococcus aureus. The peptide fragments are useful in the prophylaxis or treatment of diseases or disorders involving the C5a-receptor (C5aR) and/or formylated peptide receptor (FPR) or neutrophils, monocytes and endothelial cells or involving acute or chronic inflammation reactions. The diseases or disorders include cardiovascular diseases, disease of the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, joint diseases, respiratory diseases, joint diseases,

The peptide fragments are useful in the prophylaxis or treatment of diseases or disorders involving the C5areceptor (C5aR) and/or formylated peptide receptor (PPR) or neutrophils, monocytes and endothelial cells or involving acute or chronic inflammation reactions. The diseases or disorders include cardiovascular diseases, disease of the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, joint diseases, respiratory diseases, joint diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Combination of peptides derived from chemotaxis inhibiting protein from Staphylococcus aureus (CHIPS) having CHIPS activity, useful in prophylaxis and treatment of inflammation, cardiovascular, skin and kidney diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to peptides (ABR44811-ABR47162 and ABR47164-ABR47385) derived from the Chemotaxis Inhibitory Protein (CHIPS) from Staphylococous aureus. The peptide fragments are useful in the prophylaxis or treatment of diseases or disorders involving the C5areceptor (C5aR) and/or formylated peptide receptor (FPR) or neutrophils, monocytes and endothelial cells or involving acute or chronic inflammation reactions. The diseases or disorders include cardiovascular diseases, disease of the central nervous system, gastrointestinal diseases, akin diseases, genitourinary diseases, joint diseases, respiratory diseases,

The present invention relates to peptides (ABR44811-ABR47162 and ABR47164-ABR47385) derived from the Chemotaxis Inhibitory Protein (CHIPS) from Staphyloacocus aureus. The peptide fragments are useful in the prophylaxis or treatment of diseases or disorders involving the C5arceptor (C5aR) and/or formylated peptide receptor (FPR) or neutrophils, monocytes and endothelial cells or involving acute or chronic inflammation reactions. The diseases or disorders include cardiovascular diseases, disease of the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, joint diseases, respiratory diseases, joint diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CHIPS; Chemotaxis Inhibitory Protein; CSa-receptor; CSaR; formylated peptide receptor; FPR; neutrophil; monocyte; endothelial cell inflammation; cardiovascular disease; central nervous system disease; gastrointestinal disease; skin disease; gonitourinary disease; joint disease; respiratory disease; HV infection; antiinflammatory; cardiant; cerebroprotective; neuroprotective; nootropic; dermatological; gynecological; immunosuppressive; anti-HIV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Combination of peptides derived from chemotaxis inhibiting protein from Staphylococcus aureus (GHIPS) having CHIPS activity, useful in prophylaxis and treatment of inflammation, cardiovascular, skin and kidney diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

The present invention relates to peptides (ABR44811-ABR47162 and ABR47164-ABR47385) derived from the Chemotaxis Inhibitory Protein (CHIPS) from Staphylococcus aureus. The peptide fragments are useful in the prophylaxis or treatment of diseases or disorders involving the C5a-receptor (C5aR) and/or formylated peptide receptor (FPR) or neutrophils, monocytes and endothelial cells or involving acute or chronic inflammation reactions. The diseases or disorders include cardiovascular diseases, disease of the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, joint diseases, respiratory diseases,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to peptides (ABR44811-ABR47162 and ABR47164-ABR47185) derived from the Chemotaxis Inhibitory Protein (CHIPS) from Staphylococcus aureus. The peptide fragments are useful in the prophylaxis or treatment of diseases or disorders involving the C5a-receptor (C5aR) and/or formylated peptide receptor (FPR) or neutrophils, monocytes and endothelial cells or involving acute or chronic inflammation reactions. The diseases or disorders include cardiovascular diseases, skin diseases, gentrourinary diseases, joint diseases, respiratory diseases, and HIV infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CHIPS; Chemotaxis Inhibitory Protein; CSa-receptor; CSaR; comylated peptide receptor; PRR; neutrophil; monocyte; endothelial cellinflammation; cardiovascular disease; central nervous system disease; gastrointestinal disease; skin disease; genitourinary disease; polint disease; respiratory disease; genitourinary disease; cardiant; cerebroprotective; neuroprotective; neuroprotective; gynecological; immunosuppressive; anti-HIV.
                                                                                                                                                                                                                                                   Combination of peptides derived from chemotaxis inhibiting protein from Staphylococcus aureus (CHIPS) having CHIPS activity, useful in prophylaxis and treatment of inflammation, cardiovascular, skin and kidney diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

The present invention relates to peptides (ABR44811-ABR47162 and ABR47164-ABR47385) derived from the Chemotaxis Inhibitory Protein (CHIPS) from Staphylococous aureus. The peptide fragments are useful in the prophylaxis or treatment of diseases or disorders involving the C5a-receptor (C5aR) and/or formylated peptide receptor (FPR) or neutrophils, monocytes and endothelial cells or involving acute or chronic inflammation reactions. The diseases or disorders include cardiovascular diseases, disease of the central nervous system, gastrointestinal diseases, skin diseases, genitourinary diseases, joint diseases, respiratory diseases and HIV infection

APPLICANT: NUMBER OF TORBIO

APPLICANT: Kume, Akinori

APPLICANT: Kume, Akinori

APPLICANT: Dama, Akiko

APPLICANT: Dama, Akiko

APPLICANT: Ting OF INVENTION: Peptide-Based Immunotherapeutic Agent for Treating Allergic Disease

TILLE OF INVENTION: Peptide-Based Immunotherapeutic Agent for Treating Allergic Disease

TURENT FILING DATE: 1998-09-09

CURRENT APPLICATION NUMBER: PCT/JP97/00740

PRIOR FILING DATE: 1997-03-10

NUMBER OF SEQ ID NOS: 174

SOFTWARE: PatentIn version 3.1

SEQ ID NO 87

LENGTH: 15

TYPE: PRT

ORGANISM: Cryptomeria japonica

FEATURE:

Sequence 285, Application US/09170496D

Patent No. 655539

GENERAL INFORMATION:
APPLICANT: Behan, Dominic P.
APPLICANT: Liaw, Chen W.
TITLE OF INVENTION: Receptors
FILE REFERENCE: AREN-0040
CURRENT APPLICATION NUMBER: US/09/170,496D
CURRENT FILING DATE: 1998-10-13
NUMBER OF SEQ ID NOS: 294
SOFTWARE: Patentin version 3.1
SEC ID NO 285
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 115, Application US/08218025A
